# Helped With 2/3- But What About TIME?

↓ Oral Health Literacy

High Turnover

Lack of Time

# We Provide People With Focused Time

- OUR TEAM: Once per week, help each resident clean thoroughly, act as leader
- THEIR CAREGIVERS: daily brushing and cleaning between the teeth.

# Services Need Names:

**Assisted Oral Hygiene:** Physical assistance with oral hygiene procedures for individuals who are unable to adequately perform their recommended self-care oral hygiene regimen. Assisted oral hygiene is a specific service and may be delivered separately or as part of a remote oral health support program.

Term Coined by workgroup consisting of members from Your Special Smiles PLLC (Jingjing Qian, RDH-EA, Brooke MO Fukuoka DMD, FSCD), a consultant (Paul Glassman, DDS, MA, MBA), faculty from Idaho State University Dental Hygiene Sciences (Rachelle Williams, MS, RDH-EA, and Ellen Rogo, PhD, RDH), and the leadership of the Idaho Oral Health Program (Kelli Broyles, RDH-EA, and Matt Zaborowski, MPH, CPH). HRSA grant funding was utilized in the development of this program.

Video Created by Your Special Smiles PLLC

# Wages Only Cost Analysis For Assisted Oral Hygiene

## \$15 per hour

- \$5 per session
- One session/week wages alone cost (\$5x 4.345)
- X 1.3 (average cost employee)

**\$28.24** /month per resident

## \$20 per hour

- \$6.67 per session
- One session/week wages alone cost (\$6.67x 4.345)
- X 1.3 (average cost employee)

**\$37.66** /month per resident

## \$30 per hour

- \$10 per session
- One session/week wages alone cost (\$10 x 4.345)
- X 1.3 (average cost employee)

**\$56.49** /month per resident

## \$40 per hour

- \$13.33 per session
- One session/week wages alone cost (\$13.33x 4.345)
- X 1.3 (average cost employee)

**\$75.31** /month per resident

\*One assisted oral hygiene session on average takes 20 minutes.

Average Cost of an employee is 1.25-1.4x their wage - for this we will use 1.3

**These costs are not entire program costs** Additional costs that may also be needed include but are not limited to: supplies, taxes, accounting, payroll programs, insurances, HIPAA compliant communication and charting/documentation systems.. We are a small program so our insurance and records costs are proportionally high because we do not have a large number through which to divide the cost. For us, it costs approximately \$40,000 per year for approximately 30 residents . We also provide cleanings/screenings twice annually which is partially included in this cost. Total cost is about \$1,333 per year per resident or about \$111 per month

# Teledentistry:

ADA Definition: Teledentistry refers to the use of telehealth systems and methodologies in dentistry. Telehealth refers to a broad variety of technologies and tactics to deliver virtual medical, health, and education services. Telehealth is not a specific service, but a collection of means to enhance care and education delivery.

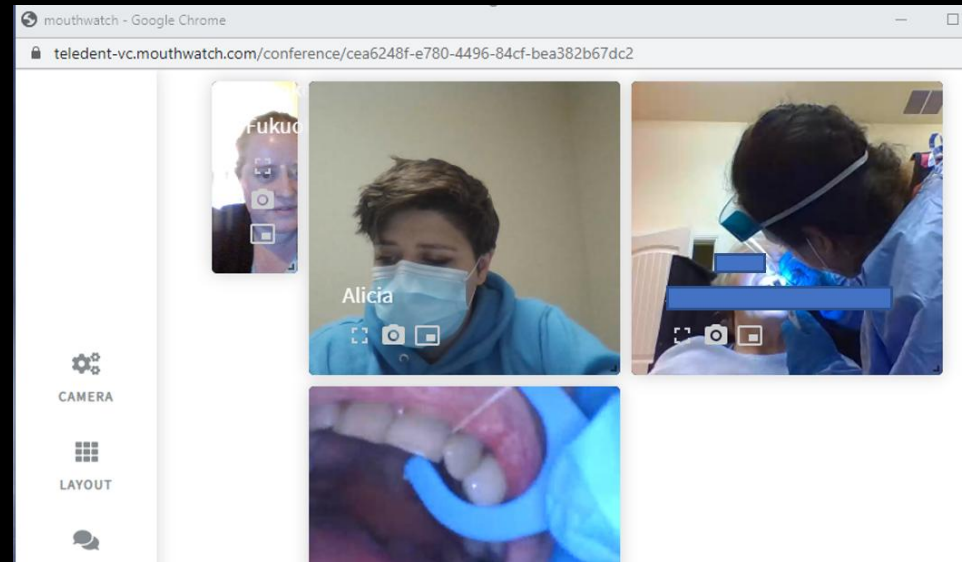

We do "X" using  
teledentistry

# Synchronous Teledentistry: D9995

ADA Definition: Live, two-way interaction between a person (patient, caregiver, or provider) and a provider using audiovisual telecommunications technology.

Watching what is happening right now

# Asynchronous Teledentistry: D9996

ADA Definition: Transmission of recorded health information (for example, radiographs, photographs, video, digital impressions and photomicrographs of patients) through a secure electronic communications system to a practitioner, who uses the information to evaluate a patient's condition or render a service outside of a real-time or live interaction

Looking at the pics  
that were sent this  
morning.

# Synchronous vs Asynchronous Pros and Cons, Where and When, Discussion

# Remote Patient Monitoring:

ADA Definition: Personal health and medical data collection from an individual in one location via electronic communication technologies, which is transmitted to a provider (sometimes via a data processing service) in a different location for use in care and related support of care

# Remote Application of Medicaments

- Use teledentistry to diagnose and have a caregiver/team member apply SDF, varnish or another medicament. (Especially helpful for caries management during the pandemic)

# Excitement and Data Gathering in the Community

# Guided Oral Hygiene

[Back to Board](#)

Utilizing audio and video technology to guide a patient or caregiver as they carry out self-care oral hygiene on a regularly scheduled basis. Guided oral hygiene is patient- specific and does not apply to the use of generic prerecorded oral hygiene instruction videos. Guided oral hygiene is a specific service and may be delivered separately or as part of a remote oral health support program. Guided oral hygiene can be represented by a combination of OHI (D41330) and synchronous teledentistry (D9995)

# Assisted Oral Hygiene

Physical assistance with oral hygiene procedures for individuals who are unable to adequately perform their recommended self-care oral hygiene regimen. Assisted oral hygiene is a specific service and may be delivered separately or as part of a remote oral health support program.

Term Coined by workgroup consisting of members from Your Special Smiles PLLC (Jingjing Qian, RDH-EA, Brooke MO Fukuoka DMD, FSCD), a consultant (Paul Glassman, DDS, MA, MBA), faculty from Idaho State University Dental Hygiene Sciences (Rachelle Williams, MS, RDH-EA, and Ellen Rogo, PhD, RDH), and the leadership of the Idaho Oral Health Program (Kelli Broyles, RDH-EA, and Matt Zaborowski, MPH, CPH). # What Can We Use to Improve These?

# Extraoral Photos By Patients: "Toothies"

Back to Board

Your Special Smiles PLLC

**Instructions for Taking Tooth/Mouth Photos "Toothies"**

Below are some helpful suggestions on how to get the best photos to assist your dentist in accurately completing a tele-dental exam. It will most likely take many shots to get one that will be acceptable for the dentist to clearly evaluate your tooth/teeth. It may help to adjust the focus of your camera, or to adjust the distance between your tooth and your camera. **DO NOT** use filters. **DO NOT** edit the photos. **DO NOT** draw on your photos unless asked to do this by your dentist. Wash your hands with soap and water and thoroughly clean any object you will be using to help you take these photos. **DO NOT** become discouraged. This is a new thing for you and it takes time to learn and get good photos. **It usually takes patients over an hour their first time to get a photo of diagnostic quality.** You will take MANY you will delete. Do not get frustrated. Take a break if you need. Allow yourself PLENTY of time.

**BACK TOOTH (MOLAR/PREMOLAR) - WHAT DOES MY DOCTOR WANT TO SEE?** Six good pictures of the tooth bothering you

Your Special Smiles PLLC

**NEED A REFLECTIVE SURFACE TO GET THAT SHOT?** butter knives, cheese spreaders or makeup mirrors work well. If you can see yourself clearly in the surface it is better than a surface that looks blurry. If you can get the shot without using a surface it will be the clearest.

**REFLECTIVE SURFACE FOGGING UP WHEN YOU TRY TO TAKE THE PICTURE?** Warm it up with hot water before using (not too hot so you don't burn yourself).

**CAN'T GET THE MIRROR IN YOUR MOUTH?**

Insert corner is slightly closed   Rotate into mouth   Then angle it to see all teeth

This publication is/has supported by the Health Resources and Services Administration (HRSA) of the U.S. Department of Health and Human Services (HHS) as part of an award totaling \$1.9 million with 40% percentage financed with non-governmental sources. Your Special Smiles PLLC

**NOT ENOUGH LIGHT?** Turn on your flash or use a flashlight

**LIPS OR TONGUE IN THE WAY?** A clean spoon, a dull butter knife, a cheese spreader, or the back end of a toothbrush can be used to hold your lips out of the way.

**IMAGE QUALITY LOW?** Try "blob" mode instead of "selfie" mode. Use a mirror to make sure you have a good shot. The "blob" camera may be higher quality than the "selfie". If your reflective surface is better than a surface that looks blurry, if you can get the shot without using a surface it will be the clearest. If you have iPhone 11 the 16:9 aspect ratio seems to be the clearest
